JOURNAL OF CRYSTAL GROWTH

Subject index

Aluminum 223
Apparatus
– for in situ atomic force microscopy observation of growth 118
– for melt growth
– – by axial magnetic field with vertical gradient freeze
– – – of gallium arsenide 10
– for mixed crystal growth
– – of bismuth antimonide 151

Barium
– nickel sulphide 197

Cadmium
– telluride 251
Cellular growth
– of succinonitrite 205
Characterization
– by atomic force microscopy
– – of gallium arsenide on silicone 23
– – of stepped surfaces 1, 68
– by in situ atomic force microscopy
– – of solution grown hydroxyapatite 118
Computer simulation
– of convection 351
– of dendritic growth 386
– of heat flow 10, 280
– of interface shape 172, 213
– of vapor phase epitaxy on patterned substrates 163
Convection 60, 156, 280, 351, 370
Copper
– acetate hydrate 108
– acetate pyrazine 108
– ferrite 322
– indium selenide 315

Defects
– decrease in isoelectronically doped films 19
Dendritic growth
– of pure materials 386
– theory of 377
– theory of natural convection 370
Device characterization
– wave guides of indium gallium arsenide phosphide 27
Diamond 297
Diffusional control
– of boundary layer in germanium silicon 60
– of Marangoni flow 156
– of surface growth 240

Epitaxy, see Thin film growth
Etching
– chemical 92, 189
– – of L-arginine phosphate (LAP) 369

Gallium
– aluminum arsenide 240
– antimonide 213
– arsenide 1, 10, 23, 85, 231
– indium phosphide 410
– selenide 269
Germanium
– silicon 60, 275

Heat flow control, of
– dendritic growth 377
Hydrodynamics, see Convection

Indium
– gallium arsenide 19
– gallium arsenide phosphide 27
– gallium phosphide 249

Kinetics
– of growth 60, 92, 118, 136, 240, 339, 351, 377
– of interface control 213
– of nucleation 113, 118
– of recrystallisation 223

Lysozyme 136

Melt growth technique
– by Bridgman–Stockbarger method
– – of copper indium selenide 315
– – of gallium antimonide 213
– – of germanium silicone 60
– – of uranium telluride 418
– – theory of Marangoni convection 156
– by Czochralski method
– – of silicon 47, 280
– – of silicon germanium 275
– – theory of interface shape 172

- by floating zone method
- - of cuprous ferrite 322
- - of molybdenum carbide 202
- - of tungsten boride 81
- - theory of 98
- by modified Stepaneve method
- - of bismuth antimonide 151
- by traveling heater method
- - of spinel fibers 193
- by vertical gradient freeze
- - of gallium arsenide 10

Mercury
- cadmium telluride 34

Microgravity, growth under
- of pure materials 386
- theory of Marangoni convection 156
- theory of natural convection 370

Morphological stability
- of directional solidification 205
- of singular gallium arsenide (001) 1

Nonlinear optics, crystals for
- 1-(3-thienyl)-3-(4-bromophenyl)-propene-1-one 415
- zinc tris sulphate 92

Nucleation
- of aluminum potassium sulphate 113
- of cadmium telluride 251
- of diamond 297

Numbers
- Grashof 60, 156, 280
- Marangoni 156
- Peclet 377
- Prandtl 280
- Rayleigh 60, 280

Phase diagram
- of barium nickel sulphide 197
- of zinc strontium sulphide 339

Proteins
- basic interaction energies 126

Silicon 47, 54
- carbide 72, 303
- germanium 189, 262

Solid growth technique
- by recrystallization
- - of uranium telluride 418

Solution growth technique
- by electrocrystallization
- - of organic charge transfer complexes 145
- by evaporation
- - of 1-(3-thienyl)-3-(4-bromophenyl)-propene-1-one 415
- by flux method
- - of barium nickel sulphide 197
- - of diamond 297
- - of transition metal antimony oxides 334
- by low temperature method
- - of hydroxyapatite 118
- - of lysozyme 136
- - of zinc tris sulphate 92
- theory of convection 351

Stefan problem or moving boundary problem
- of dendrite 377, 386
- of vapor grown gallium arsenide 163

Superconductivity materials, high T_c
- film
- - of YBCO 68

Superlattices, multilayers
- of silicon germanium 262

Surface structure
- of epitaxy 163
- of gallium arsenide on silicon 23
- of stepped surfaces 1

Thin film growth, epitaxy
- by all techniques
- - theory of lattice constants 401
- by gas source molecular beam epitaxy
- - of zinc selenide 41
- by liquid phase epitaxy
- - of indium gallium arsenide 19
- - of mercury cadmium telluride 34
- - of silicon 54
- by molecular beam epitaxy
- - of gallium arsenide 1, 85
- - of gallium selenide 269
- - of silicon carbide 72
- - theory of 140
- by vapor phase epitaxy
- - through chemical vapor deposition
- - - of 3C-silicon carbide 303
- - - of silicon germanium 189
- - - theory of growth on patterned substrates 163
- - through evaporation and condensation
- - - of gallium indium phosphide 410
- - - of zinc strontium sulphide 339
- - through metalorganic chemical vapor deposition
- - - of aluminum gallium arsenide 240
- - - of cadmium telluride 251
- - - of gallium arsenide 23, 231
- - - of indium gallium arsenide phosphide 27
- - - of yttrium barium cuprates 68

Tungsten
- boride 81

Vapor growth technique
- by chemical transport
- - of gallium indium phosphide 410
- - of uranium telluride 418
- by evaporation and condensation
- - of picrochromite 329

Whisker growth
- of picrochromite 329
- of samarium barium cuprate 293

Zinc
- selenide 41
